

DESIAPPLE

DEHYDRATED APPLE POMACE IN PELLETS

A healthy and tasty product

Désialis

DESIAPPLE derives from the production of apples grown and processed in the main French cideries (non-GMO seeds) : the security of a **100% traced product, FCA certified and NOPS-tested.**

A large pile of dark brown, cylindrical wood pellets, which are a common form of biomass fuel. The pellets are stacked closely together, filling most of the frame. A solid red vertical bar is visible on the right side of the image.

After extracting the juice from the apples, the pomaces are treated by the dehydration plants in which they are simply dried and granulated.

No physico-chemical extraction process is made; thus, all the nutrients of the original raw material are preserved. Apples are naturally rich in cellulosic materials, organic acids and pectic

Dehydration process allows to preserve the olfactory qualities of apples, that makes it a useful raw material for the manufacture of naturally perfumed feed ideal for the Pet Food market.

The certification FCA (Feed Chain Alliance) implies the respect of European and French directives. In this way, all the links involved in the production, from the manufacturing process to the transportation of the product are targeted and validated.

DESIAPPLE
certified quality

According to the FEI rules, we guarantee through this logo that our products for horse feed are systematically analyzed in accordance with a **discharge control plan** and are therefore **free from the main Naturally Occuring Prohibited Substances (NOPS)**. Then, these products can be **used in the composition of race horses feedingstuffs**.
