

RUMILUZ POULTRY SB

DEHYDRATED LONG CHOPPED ALFALFA IN
BALES OF 20 KG

**A source of fiber to reduce
aggressiveness**

Désialis

Rumiluz is recommended as a preventative to limit the occurrence of pecking problems, to:

- **Contribute to the enrichment of the environment**, and this from the early stage layer pullet
- **Bring extra fiber into the diet** of laying hens

ALFALFA FIBER IS MORE DIGESTIBLE AND PALATABLE

Rumiluz is developed using a unique industrial process, ensuring uniform and traceable quality

- 100% from French crops (non-GMO seeds)
- the **heat treatment at high temperature** at the time of dehydration eliminates any germ present,
- the **individual packaging of the bales** protects the product from any subsequent recontamination,
- the **presentation of the ball in, mostly, from 3 to 5 cm strands** pressed at very high density ensures a lasting behavior and limits distributions.

RECOMMENDATIONS FOR USE

- 1 bale/1000 hens/15 days for a consumption of 1 to 2 g/hen/day
- Setting up small bales from the early stage layer pullet to get them used
- Raise the small bale on a pad for optimal consumption
- Alternating with other tools (flock blocks, ropes, toys ...) to diversify the sources of occupation and create novelty

“ **EASY TO TRANSPORT, TO MANIPULATE AND TO DISTRIBUTE,** ”

► Bagged small bale of 20 kg with plastic strapped dimensions 0.50m x 0.30m x 0.30m

► 48 bales per pallet- individually bagged
6 x 8 bales - 960 kg - top-covered/film-wrapped
pallet - 1.00m x 2.00m x 1.20m
