

# STROFIBRE PLUS

DEFIBRATED AND DUSTED CEREAL STRAW BALL WITH STRAW PELLETS

**QUALITY FIBRES, OPTIMISED  
TRANSPORT**

The best fibers  
**FOR BREEDERS**

Désialis

**STROFIBRE PLUS MORE AVAILABLE :**

- 360 kg bales -  $\approx 1.4 \times 1.2 \times 0.75$  m

# STROFIBRE PLUS: CHOPED DUSTED CEREALS STRAW BALE AND PELLETS INSIDE

The latest scientific studies (Havekes et al. 2019 \*) have shown the interest of a **short straw fibre supply ensuring a better intake** (of more than 1 kgMS at the end of the «Close-up dry» calving preparation) for a **better metabolic health of the cow in early lactation**.

## STROFIBRE PLUS: A UNIQUE PROCESS FOR UNIQUE FIBRES

- Our controlled defibration process ensures a **consistent strand length of 2-4 cm**.
- Our unique de-dusting process ensures control and **stability of the ash and mineral levels** in **STROFIBRE PLUS**, as well as **comfort during distribution**.

## CURING: A KEY PHASE IN THE DAIRY PRODUCTION CYCLE

In dairy production, the dry period is necessary to provide the udder with a resting period to fight infections and regenerate tissues for a good start of the next lactation. The farmer's objective is also to facilitate the birth of a healthy calf. The nutrition of the dry cow during this period should prevent problems related to milk fever and the consequences of over fattening.

One should therefore look for a ration that ensures :

1. **A maximum intake level** that will be maintained at the beginning of the next lactation with a moderate energy concentration,
2. As low or negative a BACA level as possible, controlled by a **low potassium level**,
3. **Reduced calcium intake**.

**FOR AN OPTIMAL RATION**

## STROFIBRE PLUS: THE SOLUTION FOR AN OPTIMAL RATION IN THE DRY PERIOD

At the beginning of the dry period («early dry» over the first 5 weeks) the intake capacity must be **maintained with a «bulky» and low-concentrated ration** while keeping the ingredients of the lactation ration to maintain the activity of the ruminal papillae.

**STROFIBRE PLUS** provides the best compromise between low energy levels and low potassium and calcium contents.

## OPTIMISATION OF TRANSPORT AND LOGISTICS

**STROFIBRE PLUS** is a defibred and dust-free cereal straw bale with straw pellets inside.

Weight increase per bale and therefore an optimisation of the transport cost. For the same number of bales loaded, the weight transported is greater, thus optimising the transport package.

**THE ASSURANCE OF A PRODUCT FROM A QUALITY CHAIN**

All the cereal straws used in the composition of **STROFIBRE PLUS** are **secured by an FCA-certified supply** and are **subject to rigorous selection to limit mould and mycotoxin contamination**.

**100% from French crops.**

**The assurance of a product from a quality chain**

## CEREAL STRAW BALE DEFIBRATED AND DEEPENED

### Advice on use:

- Early dry dairy cow: up to 7.0 kg
- Dairy cow in preparation for calving (Close-up dry): 2 to 3 kg
- Suckler cow: 5 to 6 kg gross  
Ewe: 1 to 1.5 kg
