

# RUMISOFT™

REFINED ALFALFA IN BALES

**Improved ingestion**  
**Optimized digestion**

The best fibers  
**FOR BREEDERS**

Désialis

## REFINED ALFALFA : A UNIQUE PROCESS

Rumisoft, developed by Désialis, is an innovative presentation of alfalfa fiber.

This innovation is made possible by a unique and exclusive process for deconstructing alfalfa fibers : fibre is removed from fresh alfalfa and refined before being squizzed and dehydrated. This physical technological treatment, derived from the paper industry and applied to fresh alfalfa before dehydration, transforms the fibrous part of the alfalfa (coarse stems) from a size of 2/4 cm to a finer size of less than 1 cm in length.

## FIBERS THAT INCREASE INGESTION...

The destructuring process reduces the particle size of alfalfa stalks, making the fibers softer and less aggressive to the animal's mucous membranes. Served as a dry ration to sheep, alfalfa improves feed intake, both in terms of quantity and regularity.

## ... AND IMPROVE RATION EFFICIENCY

Reducing particle size, while maintaining a sufficient level to ensure proper rumen function, facilitates fiber degradation by increasing attack sites for ruminal microbiota. With enhanced ingestion and improved degradability, the result is a better energy intake for small ruminants, leading to improved milk production.

**RUMISOFT™ CONTRIBUTES  
TO ANIMAL WELFARE**

## RUMISOFT™ LOCAL SOURCING - SECURE AND TRACEABLE

RUMISOFT is 100% French Origin - VLOG - adapted to «GMO-free».

**PHYSICO-CHEMICAL  
PROPERTIES THAT  
IMPROVE DIGESTIBILITY**

The best fibers  
**FOR BREEDERS**

## REFINED ALFALFA IN 350 KG BALES

### GROSS REFERENCE VALUES

Refer tpo [www.desialis.com](http://www.desialis.com)  
for all updated values

### INSTRUCTION FOR USE

Ewes:	0,5 à 1 kg
Ewe lambs :	0,2 à 0.4 kg
Goats :	0.5 à 1 kg
Kids:	0.2 à 0.4 kg
Horses	1 à 4 kg
