

STROFIBRE LIGHT

CEREALS STRAW BALE DEFIBERED AND DUSTED

QUALITY FIBERS FOR A SECURE DRY-OFF

The best fibers
FOR BREEDERS

Désialis

STROFIBRE LIGHT AVAILABILITY:

- 270 kg bales - $\approx 1,25 \times 1,17 \times 0,75$ m
 - 15 kg bales - $\approx 0,50 \times 0,30 \times 0,30$ m
- 48 bale of 15 kg packed per pallet -
6 x 8 bales (720 kg)

STROFIBRE LIGHT : CEREAL STRAW BALE DEFIBERED CHOPED AND DUSTED

DRY OFF : A KEY PHASE IN DAIRY COWS PRODUCTION CYCLE.

Dry off period in dairy production is needed to provide the udder a rest period. It is crucial as it allows to fight infections and regenerate tissues in order to start correctly the next lactation. An easy calving of a healthy calf is also an objective sought by the producer. Nutrition of dry cow during this period should prevent disorders linked to milk fever and consequences over-fattening.

The ration should **ensures** :

- **A maximum level of feed intake** which will be maintained at the beginning of the next lactation with **a moderate energy concentration**,
- The lowest or even negative level of BACA, monitored by **a low level of potassium**
- **A reduction of calcium intake.**

STROFIBRE LIGHT : THE SOLUTION

At the beginning of dry-off (« Early dry » for the 5 first weeks) feed intake capacity must be maintained with a « bulky » ration lowly concentrated (0,75 UFL/kg MS) while preserving ingredients of lactating ration to maintain ruminal papillae activity.

**FOR A OPTIMAL
RATION**

STROFIBRE LIGHT ensures the best compromise between **low level of energy and low potassium and calcium contents.**

A UNIQUE PROCESS FOR UNIQUE FIBERS

The latest scientific studies (Havekes et al. 2019 *) showed the interest of an intake **of straw short fibers ensuring a better ingestion** (more than 1kgMS at the end of the calving preparation phase « Close-up dry ») for **a better metabolic health of the cow at the beginning of lactation.**

➔ Our controlled defibration process ensures **a standard strand length of 2 to 4 cm.**

➔ Our unique dusting process ensures a controlled and **stable level of ashes and minerals** contained in **STROFIBRE LIGHT**, as well as **comfort during distribution.**

**THE GUARANTEE OF
A PRODUCT FROM A
QUALITY SECTOR**

All cereals straws entering in **STROFIBRE LIGHT** composition **are secured by a certified FCA supply** and are **strictly selected to limit mould and mycotoxins contamination.**
100% from French crop.

**CEREALS STRAW BALE DEFIBERED
AND DUSTED**

Advice on use :

Dairy cows at the beginning of
dry-off (Early dry) : up to 7,0
kg

Dairy cows preparing calving
(Close-up dry) : from 2 to 3 kg

Beef cows : 5 to 6 kg

Dairy ewes : 1 to 1,5 kg
